Operational Incident & Delivery Delay Escalation Procedures

Document Classification: Internal Enterprise Policy & Standard Operating Procedure

Effective Date: January 1, 2026 | **Version:** 2.4

1. Escalation Hierarchy

Operational delays must be escalated based on severity level. For Low and Medium severity (orders with 24-48 hours remaining), the Logistics Coordinator manages remediation. For High severity (under 12 hours remaining), the Operations Manager must be notified. For Critical severity (breached SLA or under 0 hours remaining), the Operations Director receives direct notification.

2. Required Communications

When an order enters High or Critical severity status, operations must notify customer support within 60 minutes. An official delay notification containing root cause summary and estimated revised delivery window must be provided to the account representative.

3. Supplier Escalations

If a delivery delay is attributed to supplier stockouts or delayed supplier inbound shipments, the Procurement Team must immediately issue an expedited vendor notice and assess secondary supplier availability.
